# Press Release

## **Analyze, Visualize, and Manage Storage Resources**

### Key Metric Software Releases FolderSizes 4.5

**TRAVERSE CITY, MI – January 30<sup>th</sup>, 2008:** Key Metric Software has released version 4.5 of FolderSizes – its professional-grade disk space analysis and visualization software.

FolderSizes 4.5 is a major upgrade, featuring Unicode support, a command-line interface into its integrated search facilities, improved “natural language” file system object sorting, numerous performance enhancements, more flexible search and filtering criteria, and much more.

FolderSizes is able to analyze local and remote (network) file systems, allowing users to visualize how enterprise data storage resources are being utilized. FolderSizes can quickly isolate duplicate, large, and temporary files – as well as report on distribution of files by age, size, attributes, owner, and even path length. The software offers advanced scan filtering, exporting and importing capabilities, and a highly customizable user interface.

FolderSizes also provides an integrated search facility that is able to find files by name (with wildcard and regular expression matching engines), date range, size, name or path length, attributes, owner, and more. The FolderSizes search system makes it easy to answer questions such as “Which file system paths have lengths exceeding 256 characters” or “Which files have not been modified in over a month?” FolderSizes can search multiple local and network file system paths at a time.

FolderSizes 4.5 supports Windows 2000, XP, Vista, Server 2003, and Server 2008. Pricing starts at \$50.00 USD for a single-user license, with multi-user and site-wide licensing options also available. FolderSizes 4.5 can be downloaded from <http://www.folderisizes.com>, with a free 15-day (feature complete) trial period available to new users. Contact [sales@foldersizes.com](mailto:sales@foldersizes.com) for more information.

**For Release 9 a.m. EDT, January 30<sup>th</sup>, 2008**
