# Press Release

## Key Metric Software Releases Version 3.6 of FolderSizes

## New Version Extends Disk Space Management Capabilities

**TRAVERSE CITY, MI – March 3rd, 2006:** Key Metric Software today released version 3.6 of FolderSizes - its network-enabled disk space analysis software. This new revision extends the product's existing feature set with an integrated, multi-path search facility, new file scan filtering capability, superior user interface customization, and improved report export functionality.

First released in early 2003, FolderSizes allows organizations to quickly visualize disk space utilization, identify storage requirement trends, streamline backup sets, and reduce storage ownership costs. It produces interactive, visual disk space analysis reports and can isolate large, old, temporary and duplicate files, and even show disk space usage by file type or owner. All with multiple export formats (including HTML, XML, and CSV), command-line support, shell context menu integration, built-in network awareness, and much more.

FolderSizes runs on Windows 95, 98, ME, NT4, 2000, XP Home, XP Pro, and Windows Server 2003. A single-user license costs $39.95. It can be downloaded for free from http://www.foldersizes.com, and offers a 15-day, fully functional trial period.

**For Release 9 a.m. EDT, July 12, 2004**
